

Build Your New Reality

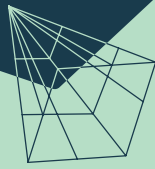

A new way to design projects that blend seamlessly with their surroundings from every perspective. Explore, create and share your work in a 3D urban context. That's the Simplex Advantage.

The Power of 3D tech

Simplex 3D is a private interactive workspace that provides architects with the highest resolution 360° representation of the entire city, integrated with substantive data layers, advanced planning capabilities, and professional-grade tools.

In just a few clicks, you can effortlessly access relevant data points and import your architectural model for analysis within its environmental context. Furthermore, you are given tools to collaborate with internal and external stakeholders, enabling you to streamline communications and drive efficiencies.

15°N : 30°W

A better way to work

3D photorealistic views at the world's highest resolution

Visualize future developments

Import your model from Revit, Rhino, SketchUp, and more

View from every window

Cut polygons and replace with your architectural model

Shade analysis for any day throughout the year

Professional grade measurement tools

Easily collaborate with stakeholders

Intuitive and easy to use on your secure, private workspace

All the data at your fingertips

Simplex 3D empowers architects to access a wealth of essential information, facilitating a deep understanding of the built environment.

Development rights, such as buildable and transferable air rights and conversions

Points of interest and landmarks

Zoning information

Land use and urban planning initiatives

Parcel data

Topography and elevation data

Real estate market data

Many more available data layers
